

Mtk droid tools scatter file

Continue

hovatek Administrator This tutorial will explain how to create a scatter file for a Mediatek Android device using MTK Droid tools. You'll need a scatter file to use SP flash tool in fixing a bricked Android or flashing files to it. In this guide, I'll assume you'll be making use of a functioning device to create the scatter file for a bricked device of the same type. let's begin. How to generate a scatter file using MTK Droid tools Follow the steps below to generate a scatter file using MTK Droid Tools & ROM Studio Download MTK droid tools Install ADB drivers for your device If you can't find ADB drivers for your device, install PdaNet on your PC and connect your device with USB debugging enabled ie settings > developer > tick USB debugging. (PdaNet automatically installs the ADB drivers for the connected device type) Root and Install Busybox on your Android Launch MTK droid tools on your PC It will read your device and display your device's info The box at the bottom should be yellow Click root and then grant super user privileges when prompted on your phone. The box should turn green Click Blocks Map then select create scatter file at the bottom. If this doesn't work, proceed to 9b Click ADB terminal type adb devices then press enter Your device should be displayed Type these following commands and press Enter after each Code:adb shell cat /proc/mtd if the second command doesn't show a list, try A Partition table will appear. to save it type this command:cat /proc/mtd > /sdcard/firmware.info or cat /proc/emmc > /sdcard/firmware.info As the case may be. Now Put ur phone in storage mode or check your SD card and you should see firmware.info If the ADB method fails, repeat step 1 to step 9 then click on the root, backup, recovery tab in MTK droid tools then select backup. Wait for the process to complete then get the firmware.info from the backups folder in the MTK droid tools folder After that, use MTK ROM Studio to load firmware.info and generate the corresponding scatter file that will be needed for SP Flash Tool. Important Notice: MTK Droid tools only works for older MTK chipsets and Android versions. For those using newer devices, consider using more modern approaches like building the scatter file from scratch or modifying an existing one Do not go formatting your device just because you have a scatter file. Its just one of the files found in a firmware so you're still far from obtaining a complete firmware Its often wiser to just go ahead and do a full MTK Droid tools backup. This guide only assumes you are unable to backup or only need a scatter file for other purposes Note! We have a reply schedule for Free Support. Please upgrade to Private Support if you can't wait. sarry86 Techie Member (14-12-2013, 10:57 PM)hovatek Wrote: You'll need a scatter file to use SP flash tool in fixing a bricked Android or flashing files to it. Download MTK Droid Tools gives you many features including flashing the Android smartphone, backup stock firmware, make scatter files for MediaTek devices. Furthermore, it is easy to root Android devices with the latest MTK Droid tool 2.5.3. Before using the droid tools, bear in your mind that this tool was designed for the MediaTek devices so, non-MediaTek smartphones won't be able to get the support of MTK Flash Tool. Note that flashing and rooting an Android mobile can cause for brick or void the devices' warranty. If you're an owner of a MediaTek device, you have come to the right place. In here, we will show you a complete guide of Android rooting using the latest MTK Droid tool v2.5.3. Also, we have provided the download links of flash tool to make the process easy. Before start rooting your smartphone, read this guide carefully and it may cause to save your smartphone. Download MTK Root Tools Rooting your android mobile with flash tools like MTK Droid Tools is risky when you have doubts or new to rooting stuff. Especially with different MediaTek powered smartphones. So please make sure you know what you are doing and you have all the corrects tools and files. Otherwise, you may BRICK your device. We strongly suggest you use One Click Root if you knew or not 100 % sure about rooting your device. Plus OneClickRoot comes with premium support and 24/7 support. Download One Click Root for MediaTek powered smartphones MTK Flash Tool Change Logs Android MediaTek mobile flashing Flashing smart phone is just a single click away with driver download. Activate USB Debugging > Connect your mobile device > tap "Root". Stock recovery and recovery restoring of the device is enabled. You can back up the stock firmware of MediaTek device. You can create scatter files to support flash any stock firmware on MediaTek devices. IMEI restoring and backup is supported for any kind of MediaTek mobile along with chipset compatibility. Read Before MTK Android MediaTek Device Flash MTK Flash Tool is only compatible with MediaTek smart phones only. It may not work with other types of mobile devices. Flashing using this root tool is at your own risk. To flash stock ROM files may void the vendor's warranty. The file "pwn" is a file used to root your Android device, which will be detected as a malware by your antivirus guard. Detecting the file causes incomplete ROM flashing. MTK Driver Download System Requirements MediaTek mobile Download PdaNet Download MTK-root tool Windows PC USB cable of the device Complete Tutorial on MediaTek Device Root with MTK Flash Tools Go to "Settings" > "Developer" > check "USB Debugging". Establish the connection between the mobile and the PC. We will get a message "drivers successfully installed" at the end of the installation. Run the tool as administrator (Right click > Run as Administrator) The tool detects and display device info at the left side. Click "Root" at the bottom and then click OK if PC prompts and grant if it does on mobile. A progress bar appears and gradually it becomes Green from Yellow. Click "Backup" and create a backup before rooting. After completion of the backup click "To prepare blocks for flash Tool". Follow the instruction appear on the display and MDK Droid tool will start rooting your MediaTek. Video Tutorial on MTK Droid Tools MediaTek device rooting and flashing with this is an ideal tool. Download the version 2.5.3 of this tool for your device and root your MediaTek smart phone for a smart use.
